

OH YU CHUAN

Python Developer | Computer Science Student

Berlin, DE • +49 176 77628402 • ohyuchuan@gmail.com • www.linkedin.com/in/yu-chuan-oh • github.com/yc82628

PROFILE

Computer Science student and Python developer with hands-on experience building and testing software systems, from autonomous AI agents to relational databases and forecasting tools. Proficient in Python, SQL, and Git, with practical exposure to LLM/AI integration, iterative build cycles, and growing cloud fundamentals. Proven ability to turn technical specifications into working, well-documented code. Comfortable working across the full development lifecycle and eager to grow within an agile engineering team.

TECHNICAL SKILLS

Languages & Scripting: Python, SQL, C/C++, Bash (learning), HTML

Software Engineering: Git/GitHub, VS Code, OOP, algorithms & data structures, input validation & error handling, API design patterns, debugging & structured logging

AI & ML Integration: LLM APIs (Cerebras, Groq, OpenAI), Ollama, prompt engineering, multi-tier fallback architecture, scikit-learn, NumPy, pandas

Cloud & Workflow (developing): Actively building fundamentals in AWS/cloud computing; familiar with Jira and Confluence; comfortable working in short, iterative build cycles (see Projects)

Data & Reporting Tools: Jupyter Notebook, Matplotlib, Seaborn, Power BI, Tableau

Operating Systems: Windows, macOS, Linux

PROJECTS

Autonomous Coding Agent | 42 Berlin x Needle HackathonMay 2026

Python, LLM APIs, Ollama

- Built an autonomous agent that reads technical specifications, plans implementations, writes code, runs tests, and repairs its own work — mirroring real-world AI product development cycles
- Architected a three-tier LLM fallback chain (Cerebras → Groq → local Ollama) to ensure system reliability, directly applicable to understanding AI product constraints
- Worked in a tight, iterative 48-hour build cycle with a remote teammate via Discord — planning, testing, and repairing code in short sprints, an agile-style way of working
- Implemented comprehensive logging across all agent decisions and failures (prompts.log, decisions.log, errors.log), demonstrating a systematic approach to debugging and product discovery
- Passed 61.3% of public test cases in a competitive environment; published full documentation and code on GitHub

Healthcare Relational Database & Python Interface | Academic Project, BSBI2024

SQL, Python

- Designed and implemented a normalised 3NF relational database schema, reducing estimated data redundancy by 30%
- Built a Python interface layer with input validation and structured error handling, mirroring real-world API design patterns
- Authored complex SQL queries (INNER JOINS, aggregations) to power core application logic
- Documented full system architecture and setup procedures for maintainability and handover

Stock Price Prediction Simulation | Academic Project, BSBI2024

Python

- Developed and coded forecasting models (Linear Regression, Moving Averages) in Python, achieving 12% lower RMSE through feature engineering
- Built an end-to-end data pipeline: missing value handling, feature normalisation, time-series variable creation

WORK EXPERIENCE

Working Student | Mmaah Korean Restaurant, BerlinMar 2025 – Nov 2025

- Implemented a delivery checklist system, cutting discrepancies by 15% through process improvement and structured documentation
- Documented SOPs and ran structured handovers for new team members, ensuring consistent performance across shifts
- Tracked and recorded 50+ product categories, identifying and resolving data errors to maintain accurate records
- Coordinated across front-of-house and kitchen teams simultaneously, managing multiple priorities under pressure

EDUCATION

BSc (Hons) Computer Science | BSBI Berlin School of Business and InnovationOct 2023 – Oct 2026

- Relevant coursework: Programming Fundamentals, Data Structures & Algorithms, Software Development, Database Systems, Object-Oriented Programming
- Actively building skills in Machine Learning, Data Analysis, IT systems, AI systems design, and product documentation
